50X1

  
August 24, 1960

Dear Sir:

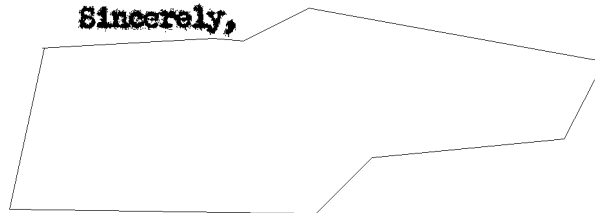

This letter report summarizes the research performed under Task Order No. KK, Work Order No. II, during the period October 21 through December 20, 1959.

This work consisted of (1) the design, construction, and evaluation of a simple fly-ash collector for the Model 1 prototype incinerator, and (2) the assembly of an auxiliary stand-by source of air (gasoline-engine-driven blower), and the operation of the Model 1 prototype unit using both air supplies (i.e., also the electric-motor-driven blower) in a small room typical of office space. The results of this effort, and subsequent demonstrations for you and your associates, were described in detail in the "Summary Report on Task Order No. 2", dated May 1, 1960; that report covered all of the work performed on the development of the Model 1 paper-burning incinerator and of an experimental feeding mechanism. All of the Work Order No. II information was integrated into that report in order to provide a coherent "picture" of the various closely associated items.

We would appreciate any comments which you or your associates might care to make with regard to the research.

50X1

Sincerely,

50X1

  
In Triplicate
